

MONTH 1

RUST COMMUNITY

Week

1

INTRODUCTION

Day 1-3 Basic concepts
Day 4-6 Borrowing

Week

2

RUST ESSENTIALS

Day 1-3 Data Structures
like struct, enums

Day 4-6 Pattern Matching
& Error Handling

CONCURRENCY & MULTITHREADING

Week

3

Day 1-3 Threads and Concurrency
Day 4-6 Asynchronous and
Async/Wait

Week

4

ROOKIE PROJECT

Day 1-7 Project using what
we have learned

MONTH 2

RUST COMMUNITY

Week

RUST INTERMEDIATE

1

Day 1-3 Traits, generics, and associated functions.

Day 4- 6 standard library and explore advanced data structures like HashMaps and Vectors.

Week

ERROR HANDLING AND TESTING

2

Day 1-3 Error handling with Result and Option

Day 4-6 Explore Rust's testing framework and write tests for your projects.

Week

RUST ECOSYSTEM

3

Day 1-7 Learn about Rust's package manager, Cargo, and how to create your own packages.

Week

MINI PROJECT

4

Day 1-3: Get started with web development using the actix-web or rocket framework.

Day 4-7: Create a basic web application and host it on a free hosting platform.
